

ACTION REQUIRED!

AS9104/1A:2022 Requirements for the certification of aviation, space, and defense quality management system programs

IAQG has published the new AS9104/1A requirements for certification bodies, and PRI has been preparing to support this required transition. **We will be ready to begin auditing in conformance with the new standards in October 2023.**

In preparation for your transition audit taking place after October 1, **your action is required**:

IAQG is requiring that we perform an Organization Certification Analysis Process (OCAP) risk assessment for every audit. To do this, 120 days prior to your transition audit, you will receive a notification from PRI requesting the information that we need to complete this analysis.

- If this information is not provided to PRI at least **90** days prior to the start date of your transition audit, then a nonconformance will be issued due to the failure to comply with the program requirements.
- If the information is not provided to PRI at least **40** days prior to the start date of your transition audit, then your audit duration will be increased by 10%, as required by the standard.

The required OCAP data includes characteristics of your internal audit program, site complexity, and KPI's for on time delivery, conformity of product, and customer satisfaction. Please be sure that all this information is available, and you are ready to provide it when requested. This information will be required prior to each audit as part of your certification going forward.

If you would like more information on the new revision of AS9104/1A, and the associated impacts to your aerospace certification, please refer to the information page on our website at:
